Kaamil Khan

Chicago, IL | 630-656-0478 | kaamil12355@icloud.com

EDUCATION

DePaul University, Chicago, IL **September 2022 – June 2026**

Jarvis College of Computing and Digital Media

- Bachelor of Science in Computer Science
- 3.9 GPA (4 point scale)
- Awards: Dean's List Honoree (2022-Current)
- **Relevant Coursework:** Data Structures & Algorithms, Computer Systems, Compiler Design, Database Systems

PROJECTS

Readlytics – Distributed Reading Analytics Platform | React, FastAPI, Node.js, PostgreSQL **Jan 2026 – Jun 2026**
GitHub link: https://github.com/lilkub223/readlytics

- Engineered a microservices-based system for user, tracking, and analytics services, improving scalability and modularity
- Built REST APIs with FastAPI and Node.js using JWT authentication for secure multi-user interactions
- Containerized services with Docker and orchestrated via Docker Compose for consistent environments
- Designed inter-service communication to enable scalable data flow across services
- Developed analytics features to track user behavior and engagement metrics
- Deployed on Render with CI/CD via Jenkins to automate builds and deployment

Nutrition App – Chronic Disease Nutrition Planner | Python, Django, PostgreSQL, Docker **Feb 2026 – Apr 2026**
GitHub link: https://github.com/lilkub223/nutrition-app

- Developed a Python/Django nutrition goals page supporting calorie and macronutrient targets, weight tracking, and customizable goals
- Implemented multi-disease selection and improved goal completion and weight-tracking workflows for users managing chronic conditions
- Updated PostgreSQL database models and Django migrations; built CSV import commands for dietary restrictions and disease-food datasets, correcting ingredient references

OurPascal Compiler | Java **Sep 2025 – Nov 2025**
GitHub link: https://github.com/lilkub223/ourpascal-compiler

- Implemented a full compiler pipeline with JavaCC, including lexical analysis, recursive-descent parsing, AST construction, and semantic type checking
- Designed hash-based symbol tables, scope management, and consistency checks to validate variables, expressions, and control-flow structures
- Built a code generator that walked the AST to produce low-level assembly using stack-frame management and instruction translation, validated through extensive test programs

WORK EXPERIENCE

Amazon Fresh, Bloomingdale, IL **July 2024 – Jan 2026**

Technology & Operations Associate – Produce Department

- Monitored inventory data to improve restocking, reducing stockouts and errors by 15%
- Resolved POS and self-checkout software and hardware issues to improve system uptime, achieving 99% availability
- Optimized store layout using demand data, improving accessibility and throughput for over 200 daily customers
- Identified inventory inconsistencies caused by distributed tracking across staff and proposed one inventory lead per department, reducing manual workload by 20%.

RK Travel, Glen Ellyn, IL **May 2022 – Nov 2022**

Data Analytics Intern

- Built data pipelines to clean and structure booking data, improving reporting accuracy by 20%
- Automated SQL and Python validation checks across customer records, reducing data errors by 15%
- Analyzed peak travel times and destination trends to support planning for 100+ client trips
- Created SQL, Python, and pivot table reports to identify demand patterns, improving efficiency by 20%

LANGUAGES/FRAMEWORKS + TOOLS & PLATFORMS

Languages/Frameworks: Java, Python, C, Javascript, SQL, Node.js, Express, FastAPI, React
Tools & Platforms: PostgreSQL, Git, Docker, Jenkins, Linux/Unix, REST APIs, Microservices, CI/CD
